

BIOGRAPHY

Shawn Isham

Vice President

Engine Business, Parker Aerospace

Shawn Isham is vice president of engine business for Parker Aerospace. Named to the role in August 2019, he and his global marketing team are responsible for the business relationships with Parker's original equipment engine customers and alignment of strategies to meet their current and future needs. He is the Parker Aerospace strategic account executive for GE Aviation, Rolls-Royce, Safran, and United Technologies.

Most recently, Shawn led the business development team as director, business development at the Gas Turbine Fuel Systems for the aero engine, power generation, and on-highway truck markets. Starting with Parker Hannifin in 1998, Shawn has held a variety of business development and marketing roles with increasing responsibility across four divisions of Parker Aerospace. He brings over two decades of aerospace experience to the role in commercial, military, turbine engine, and vertical-lift markets for both original equipment manufacturers and maintenance, repair, and overhaul customers.

Shawn holds the executive master of business administration degree from Baldwin Wallace University in Berea, Ohio, and the bachelor of science degree in aeronautics from Miami University in Oxford, Ohio. He has completed the aviation safety certificate program at the University of Southern California Viterbi School of Engineering and is a certificated single-engine and multi-engine flight instructor. He is a graduate of a variety of leadership and strategy training programs, including Parker's Taking Charge of Change.

Parker Aerospace is a global leader in flight control actuation, hydraulic, fuel, inerting, fluid conveyance, pneumatic, and lubrication systems and components used on virtually every commercial and military aerospace platform in production today, from commercial transports, helicopters, and business and general aviation, to military fixed-wing aircraft and unmanned aerial vehicles.
